**Atos** 

Frontende web developer Angular

May 2023- June 2023 Proof of concept development. The POC is a table that can handle 50 rows simultaneously and ten columns. The table includes around forty controls of several types: by cells, on a complete line and multi-line. The table was created in Angular 15 using the Reactiv Forms library. Data is transmitted from a dotnet C# API.

Technical Environnement:

- Creation of a form of around ten columns based on a mockup. - Collaboration with a UX designer to improve the interface.

- Implementation of around forty different controls on the table cells and rows.

Agirc-Arrco

Fullstack web developer Java/Angular

October 2022- April 2023

Development of new features, debugging and maintenance of an application internal task management within a development team within a development tea

Technical environment: - Front server Angular 14.

- Restful API Java Spring. - ORM hibernate: auto-generated queries, JPQL and query builder.

- Unit tests with Junit. - DataBase Sql/Postgresql.

Skills:

Impropulsion

Freelance trainer:

- Creation of web services: tasks reassignments requests. - Creation of new displays: tasks reassignments requests.

- Correction of front and back anomalies reported by the qualification team. - Database configuration using SQL scripts.

- Scrum: daily meetings, backlogs, sprints, code reviews.

Communication and management skills

Develop a freelance business. Transfer skills using theatre tools and techniques.

Skills: - Develop a pedagogy.

- Manage learner teams and work meetings - Develop learner communication skills

Pôle d'intelligence logistique Sustainable logistics policy consultant

2017-2018

Promote sustainable logistics Skills:

- Manage events: railway freight and natural gas promotion events.

- Connect logistics actors and waste management actors. - Follow and boradcast academic breakthroughs.

- Conduct waste management audits.

Quipment Logistics Project Manager

Manage logistics projects in the medical research field.

Skills:

- Customer needs analysis - Logitics flows and preparation teams coordination. - Supply stocks management.

Fullstack web developer Java/Angular

exercises and a project summarizing all the skills acquired.

- Create a frontend interface with Typescript and Angular

- Create a restful backend web API with Java: JEE/JSF, Spring/Hibernate.

- Introduction to agile methods: Scrum/Jira.

- Introduction to versionning with Git.

- Responsive web integration: html/css.

- Purchases and sales teams coordination.
